

# GM Truck MOOG® Control Arm Bump Stop – K201426

## Improved Durability and Performance

The MOOG® Problem Solver® K201426 Bump Stop for GM trucks features design enhancements and premium materials that provide improved durability and performance.

K201426 features a revised geometric shape for longer life. The original equipment design is constantly affected by the weight and torque forces of these trucks and their loads, and may cause failure over time.

In addition, the MOOG K201426 bump stop is made from an enhanced microcellular urethane material that has an optimized spring rate to provide an exceptional ride, excellent load handling capability and long-lasting durability.
