 Challenge

Circlips are sensitive parts. High breakdown rates lead to frequent replacements, constant downtime and lost revenue. One competitor's solution is simply to increase the circlip diameter. The problem with these larger clips, however, is that they require modifications to the original part. Cutting wider grooves not only costs time and money, it also means that OE parts will no longer fit. In other words, you will be totally reliant on the competitor's replacement part!

 Moog Easy Solution

The revolutionary MOOG Multicycle Ring reinforces the circlips without modifying the OE part design. Because they fit the original groove dimensions of your V-bar or track control arm, you can still easily fit any repair kit or OE part you prefer for stronger, longer and more reliable performance.

**100% OE
COMPATIBLE!**

MOOG's solution fits the OE design perfectly.

The Multicycle Ring reinforces the original part without modification.

**STRONGER
PERFORMANCE,
LONGER LIFE!**
